

# AFFILIPAY

## Solutions and features

### AFFILIATE LIST

The affiliate list is an ultra-advanced template solution and provides the base from which all of Affilipay's automated features operate.

- Multiple input methods including file upload and pre-population to begin, and manual creation/auto save as you progress
- Affiliate profiles can be saved in your affiliate list with preferred with multiple payout methods attached
- Each payout method set contains all required payment details and the ability to add/remove multiple aliases/IDs
- Financial statistics of each affiliate is saved, displayed and updated accordingly
- Push to pending button for quick manual payouts
- Simple edit options for management of affiliates, their payout methods and preferences

### FILE UPLOADS

Our file upload mapping technology supports custom mapping of various information values to required fields. This means our upload system can support external exports and custom file formats.

- Provide your commission export and we'll map it to standard payout requirements - you can now import your commission extract directly to Affilipay
- Templates provided for manual file creation
- Easy file upload - with affiliates in your list, file uploads only require affiliate names/aliases, commission amounts and payout references
- Payout splitting on per commission level is supported by utilizing multiple payouts methods and aliases in the affiliate list

### SYSTEM SETTINGS

System settings are used to automate and mistake-proof previously manual processes.

- Set your default currency and all payouts can be initiated in this currency to keep things simple. Combined with the preset preferred methods/currencies of each affiliate, the system will convert default payout amounts to e.g SEK, USD, GBP, USDT accordingly
- Minimum payout thresholds can be set to further automate the batching process

### PAYOUT MANAGEMENT

The payout pending screen allows you to preview all payouts added, including necessary details as well as conversion amounts from default currency to each affiliates chosen currency.

- Add payouts to pending payout screen over the course of the day/week/month via multiple methods until it's time to initiate/execute
- Details editable on pending payout screen in case of updates/mistakes
- Payout duplication feature - if an affiliate is receiving multiple invoice/brand payouts, just add to pending screen once and from there, duplicate for multiple/separate commissions
- Payout authorization - multiple user abilities so that payouts can be added by various team members and finance team leader can review and authorize entire batch or individually as needed

### DASHBOARD

The Affilipay dashboard provides an overview of financial statistics including:

- Your safeguarded limits held with the licensed money remittance entities
- Top paid affiliates
- Total monthly volumes paid
- Payout system usage

### REMITTANCE RAILS

Affilipay is integrated into our various sister entities to provide remittance services via the following rails from just one dedicated vIBAN.

- SEPA
- SWIFT
- Crypto payouts
- Local settlements
- Over 50 currencies offered

### TEAM MANAGEMENT

Our login and permission technology allows you to manage the whole teams activities to improve the operational processes of each member.

- Individual logins for each team member
- Various permission levels depending on a team members responsibilities
- Transparent overview of actions for the team leader
- Ability to set senior review/batch approval options

### MORE TO COME

New solutions, services and features are continuously added - the following are some of the additions we're working on next:

- Integration for data feeding
- Compliance tools to expedite supporting documentation/information provision
- More currencies, cryptos and payout systems (skrill, neteller etc)

### ECOSYSTEM

Stage 2 is a planned payout ecosystem - invite your affiliates to join and enjoy the following benefits:

- The affiliates will be offered various time saving features of their own
- If they're within the system, you can initiate internal payouts to a username
- Faster and cheaper
